Heuchera micrantha Peach Crisp

Highly filled peach pink coloured from of the very popular heuchera. A great plant for a shaded area.

HEUC PEA 175 10 175 C

HYDRANGEA

A rewarding group of shrubs at their best when most others have finished for the year. The very popular H.macrophylla (H. hortensia) has very attractive heads of flowers from mid summer to autumn. They are divided into two groups - those with mop heads (round ball heads of flowers), and lacecaps (a flat head of flowers with the spectacular large flowers as a ring around the edge of the head) The flower colour may be: creamy white, pink - red, or pale blue - deep violet blue. It is most unusual in that pink or blue flowers are controlled by the availability of aluminium in the soil. Acid soils and aluminium sulphate gives blue flowers. Sweet, alkaline soils and no aluminium gives pink - red flowers. Flower size may also be dramatically improved by a good, well drained moist fertile soil, giving the best results. Pruning should be done each year in the spring and restricted to removing dead and weak wood right out at the base of the plant. Also some thinning maybe necessary to allow room for new water shoots to come through from the base each year. Do not trim the top back, as the flowerbuds were formed the previous summer/autumn. H.macrophylla should be protected from the worst of the winter frosts, this is why the deadheads should be retained until spring. I find the H.arborescens and H.paniculata forms much tougher to winter cold. They may be pruned in late winter or very early spring, as flower buds do not form until this time.

Hydrangea macrophylla Agnes Pavelli

Tall growing shrub with white blooms in summer. Mop top. Prune after winter. Ht 1m. Deciduous.

HYDR AGN 6 30 6L C
