Shrub, Perennials & Rhododendron Catalogue 2026

Dear Clients & Friends

Welcome to our 2026 Indent Catalogue. This year we proud to offer you our largest selection of Rhododendrons, Perennials, Shrubs and Trees. Plants don't get onto our list without first being tested in our trial areas where we assess them for disease resistance, plant habit, hardiness and garden habit. With our skilled breeding, market research, and horticultural best practice we are proud to offer you our carefully curated selection to help your customers enjoy life from their garden.

The Rhododendron crop is looking amazing with the cooler summer resulting in strong bushy growth. The plants have enjoyed the extra moisture. Our plants are growing in the field under shade and then lifted in the Autumn/Winter and potted into 7.5 litre pots. This process is critical to growing a quality Rhododendron. If Rhododendrons are grown in pots rather than in the field, they very quickly form a root mass at the edge of the pot that forms a glazed root system. It is very hard to get the plant to grow out of this glazed root mass and makes it hard to establish the plant in the landscape. We work hard to grow you a plant that will establish easily in your customer's garden.

This year we are particularly excited to offer an improved range of perennials including many of our old favourites including Scabiosa that we first grew here in the 1930's for cut flowers and today many of our customers still grow them for cutting. Delphinium make a return this year after an absence last year. We love the summer display they make and working with New Zealand bread varieties is very rewarding. They are truly the best in the world. Meconopsis or Tibetan Poppy are back again this year and their strong blue colour is unmatched in the garden. We have a much better seed source now so we should have these every year going forward. We have over 60

different perennials so too many to mention them all here. Have a good look through this list and if you have any questions, please feel free to send us and email or phone us. We are always happy to chat about our new and exciting plants

Cornus greenvale is the most popular dogwood in New Zealand and for good reason. It covers itself in white bracts/flower in late spring and keeps flowering until nearly Christmas. It is a more well branched tree than other dogwoods resulting in a more rounded plant with a lot more flowers

Leucothoe Crimson Globe is very popular with a compact rounded habit and deep burgundy red foliage over winter. It is a versatile plant growing well in a narrow boarder or in containers. A must for your garden centre or landscape.

It has been a challenging year with continued price pressures we have spent some time costing our production systems and freighting process. This has resulted in some price rises on our crops but also a few they have come down in price. We are dedicated to producing the best plant possible for your customers in the most efficient way possible. With continued prices rises we will assess our prices throughout the year and there maybe some changes to come.

This year will see continued changes in the market and here on the nursery we are implementing new information system, websites and production system to meet these changes- we look forward to the challenge. We also continue to breed new and exciting plants and work with other plant enthusiasts to bring you the best plants.

Enjoy the list and please contact us with any question or just to have a chat about our lovely plants.

Kind regards from the Blue Mountain Team

Denis, Chris and Rebecca Hughes

HYDRANGEA

A rewarding group of shrubs at their best when most others have finished for the year. The very popular *H. macrophylla* (*H. hortensia*) has very attractive heads of flowers from mid summer to autumn. They are divided into two groups - those with mop heads (round ball heads of flowers), and lacecaps (a flat head of flowers with the spectacular large flowers as a ring around the edge of the head) The flower colour may be: creamy white, pink - red, or pale blue - deep violet blue. It is most unusual in that pink or blue flowers are controlled by the availability of aluminium in the soil. Acid soils and aluminium sulphate gives blue flowers. Sweet, alkaline soils and no aluminium gives pink - red flowers. Flower size may also be dramatically improved by a good, well drained moist fertile soil, giving the best results. Pruning should be done each year in the spring and restricted to removing dead and weak wood right out at the base of the plant. Also some thinning maybe necessary to allow room for new water shoots to come through from the base each year. Do not trim the top back, as the flowerbuds were formed the previous summer/autumn. *H. macrophylla* should be protected from the worst of the winter frosts, this is why the deadheads should be retained until spring. I find the *H. arborescens* and *H. paniculata* forms much tougher to winter cold. They may be pruned in late winter or very early spring, as flower buds do not form until this time.

 - b. refund part or all of the amounts paid.

7. Dispute resolution

- 7.1. The parties agree that they will attempt to resolve any dispute between them arising out of these terms in good faith in the first instance.
- 7.2. If such discussion fails to resolve the dispute, either party may (by written notice to the other) refer the dispute to the Disputes Tribunal.
- 7.3. The parties must continue to comply with their obligations under these terms during the dispute resolution process.

8. Force majeure

- 8.1. Neither party will be liable for any act, omission or failure of its obligations under these terms if and to the extent that such act, omission or failure arises from any cause beyond its control, or the effect of which cannot be reasonably predicted.
- 8.2. Those events may include, but shall not be limited to, Acts of God, machinery or equipment breakdown, acts of war, epidemics, government actions which are imposed after the date of this agreement, fire, lightning strikes, power failures, earthquakes, Weather condition or other disasters (**Force Majeure**).
- 8.3. The party unable to fulfil its obligations due to a Force Majeure will immediately;
- a. notify the other in writing of the reasons for its failure to fulfil its obligations and the effect of the failures; and
 - b. use all reasonable endeavours to avoid or remove the cause and perform its obligations as soon as possible.
- 8.4. Where any delay or failure by a party to perform its obligation due to Force Majeure exceeds 30 days, either party may immediately terminate the contract on providing notice in writing to the other party.

9. Limitation of liability

- 9.1. BMN is not liable to the Purchaser for any loss or damage arising from delay or failure to perform its obligations due to any Force Majeure as outlined in clause 8.
- 9.2. Where the Consumer Guarantees Act 1993 applies, nothing in this agreement affects the Purchaser's rights and remedies under that Act.

10. Purchaser's obligations

- 10.1. The Purchaser shall not transfer or assign all or any of their rights or obligations under these terms without BMN's prior written consent.

11. Default by Purchaser

- 11.1. The Purchaser agrees to indemnify BMN and pay, on demand, all costs incurred by BMN in the enforcement of these terms.
- 11.2. If the Purchaser defaults in any payment or fails to comply with these terms, BMN may suspend or terminate this agreement and all amounts owed by the Purchaser to BMN will become due and payable.

12. General provisions

- 12.1. These terms and conditions apply to all transactions where BMN supplies plants to the Purchaser.
- 12.2. If any provision contained in these terms is held to be void or unenforceable, this will not affect the enforceability of the remaining provisions.
- 12.3. Any waiver of these terms must be made in writing and signed by an authorized person.
- 12.4. These terms are governed by the law of New Zealand.
- 12.5. BMN may review and change these terms from time to time at its sole discretion.
